

TEACHERS NOTES

The Lesson Format – A stopwatch is needed so children can be told their times. Question types should be discussed before the children attempt each test. The tests are designed to reinforce and improve rapid calculation skills, not introduce new concepts.

Children start together. As they complete the speed test, they indicate this by calling out 'finished', or putting their hand up. The teacher tells the child the time taken and this is recorded by the child in the space provided. Activities are provided for the child to go on with when finished.

Scope is provided for self-evaluation after marking.

Marking – Teachers are able to use a variety of methods for marking. One approach children enjoy is the calling of answers in groups of ten by individual class members.

Make a Booklet – By photocopying back-to-back, a week's set of four can be put on one sheet. Ten sheets can be used to make a booklet for a term. A strip of masking tape as a spine can stop these becoming ragged in appearance.

Make Your Own – A speed test blank is included in this book to allow teachers to provide for the special needs of their students.

Individual ability levels can be catered for by the teacher by reducing the number of problems to complete. This can be increased as students gain more confidence with their tables.

FEATURES OF MATHS SPEED TESTS

This page is designed to introduce and familiarise students with the tables that will be the focus over the next few pages.

Focus of this speed test.

Students complete the 50 or 100 problems on the page then indicate when finished.

Butch is very hungry. Perhaps you can help him find his way home so he can eat his dinner.

To help him you must make a path made up entirely of addition facts that equal ten. Colour the path so he can see it easily.

Work neatly because Butch is a tidy dog. You can only travel up, down and across, not diagonally.

Tip

In mathematics, answers that are the names of measuring units should be written with the unit name or abbreviation following. In other cases just the numeral is sufficient.

For example: 2 days + 3 days = 5 days
but
Jim had 6 lollies. He ate 4, how many left? Just the answer 2 is sufficient.
